Professional Summary

- Final-year Computer Science and Engineering student with experience in Python, backend development, and automation. Worked on projects involving web automation, AI-based applications, and simulations. Looking for an entry-level role in the tech industry to learn, grow, and contribute to impactful solutions.

Education

KIIT University

Sep 2022 - April 2026

Bachelor of Technology in Computer Science Engineering

Bhubaneswar, Odisha

CGPA: 8.00/10.0

- Relevant Coursework: Data Structures & Algorithms, OOPs, DBMS, Computer Networks, Software Engineering

Professional Experience

LTIMindtree

May 2025 - Jul 2025

Software Developer Intern

Bengaluru, Karnataka

- Collaborated in a team to develop an AI-driven investment recommendation platform using Python, Streamlit, and Azure OpenAI, providing personalized financial insights and analytics.
- Engineered a modern, user-friendly interface with custom CSS and interactive dashboards, including a floating chatbot, for enhanced client engagement and usability.

NullClass

Dec 2024 - Jan 2025

Data Analyst Intern

Remote

- Utilized Natural Language Processing (NLP) techniques to classify reviews into positive, negative, neutral sentiments.
- Conducted sentiment analysis on Google Play Store app reviews to identify user satisfaction and common issues.
- Built a machine learning model to predict review sentiment.

Technical Skills

Programming Languages: C, SQL, Python , JAVA, HTML5, CSS3

Python Tools: Pandas, Numpy, Beautiful Soup, Selenium, Flask, FastAPI, Streamlit

Databases: MySQL, MongoDB

Tools & Technologies: Git, GitHub , Visual Studio Code, Pycharm

Software Development Projects

Automated Data Entry Software | *Beautiful Soup, Selenium, Python* [GitHub](#)

Jun 2025 - Aug 2025

- Designed process to populate Google Forms with extracted data. Implemented CSV file generation for easy data integration and analysis.
- Built and optimized Flask REST APIs for real-time, concurrent model inference.
- Demonstrated problem-solving skills to ensure reliable, consistent data collection.

Autonomous Traffic Simulation | *Pygame, OpenCV, Tkinter, Python* [GitHub](#)

Dec 2025 - Feb 2026

- Designed dual gameplay modes (Human-controlled and AI-controlled) with seamless mode switching via GUI.
- Engineered collision detection logic and heuristic-based AI to optimize safe lane-changing behavior.
- Developed a 2D traffic simulation environment using Pygame with dynamic enemy spawning.

DocQuery AI | *RAG, FastAPI, React, Gemini API* [Live](#)

Mar 2026 - May 2026

- Developed an AI-powered document query platform using RAG architecture for contextual Q-A.
- Implemented semantic search with FAISS vector embeddings for efficient document retrieval.
- Deployed the application using Vercel and Render with a lightweight, cloud-ready architecture.

Stock Volume Prediction (Group Project) | *Broker API (Fyers), CNN (DeepLOB)*

Aug 2025 - Nov 2025

- Built an intraday volume prediction model using live order book data to help large traders execute orders with minimal market impact.
- Engineered high-frequency market microstructure features and trained a hybrid deep learning model (CNN + time-based signals + stock embeddings).
- Achieved $R^2 = 0.62$ on unseen data, enabling smarter liquidity-aware trade execution and reduced slippage.

Additional Information

- Experience:** Collaborated on building an AI-driven investment platform using Python and Streamlit, implementing secure authentication and real-time data filtering.
- Problem Solving:** Active participant in coding competitions with focus on algorithmic problem solving
